TALENT TRACKING MANAGEMENT

Problem Statement

- Develop a talent tracking management system with a single role – admin.
- The admin can register himself with the system with minimal details (Name, username, password). Once a registered user logs in to the system, he can see three tabs – Register Candidate, View Reports, Confirmed Candidates
- In register candidate, the user needs to enter the information about the new candidate. Details like Name, Date of birth, Qualification of candidate, City, State are required.
- In View reports, the user can see all the candidates' information. Against each record, there will be two buttons – Update and Remove. The update button allows to update the status (Pending Interview OR Pending Result OR Confirmed) of candidate. If the status is changed to 'Confirmed', the record is moved from view reports tab to confirmed tab. Remove button removes the record from the system.
- In Confirmed Candidates, the user can see details of all the confirmed candidates.
