GIT

KO observation 1:
Manage files with Git (move, rename, delete) and update files managed outside Git

Assignment

→ Install git on your computer and set up the global values for your user name and email

→ Configure system level and repository level values for user name and email address

→ Create a repository on GITLab space provided to you.

→ Configure the local repo with the remote repository

→ Run the add, rm, diff, commit, push command to push the changes to the remote repository
